The Fed held on October 28. Both dissenters wanted a hike.

The Fed's October 28 hold was a 10-2 decision. Both dissenters wanted higher rates.

Why it matters: Capital Chronicle's reading is that the decision and its implementation answer different questions. The vote establishes the target range and the direction of disagreement. The companion note sets out the rates and instructions used to implement that stance. A reader needs both documents to distinguish the policy choice from its operating settings.

What you are reviewing

V1 turns admitted public reporting and public-safe Capital Chronicle research into a sourced article, lawful contextual photography and eight channel-specific packages. Substantial analysis uses two to five distinct useful charts drawn from primary data. A news or policy story may omit charts when no defensible useful comparison exists; its editorial reason stays in the record.
