▼ Reuters reports IBM raises software revenue growth floor; durability is the test · Keep dated view · 1 accepted version

Reader question: Does the higher IBM software outlook signal durable new demand, or partly the arrival of deals delayed from the previous quarter?

SINGLE-SOURCE REPORT - REUTERS: IBM's reported annual software revenue growth outlook moves to about 7%-8% from 6%-8%. Transaction-processing deal mix leaves a separate question about lasting demand.

Competing explanation and limits: If the report is accurate, Kavanaugh's account of net new transaction-processing business challenges a catch-up-only reading. Fresh demand and delayed deals could coexist, so the presence of deferred business alone would not disprove improvement.

Analysis as of 2026-10-21T22:29:51.437174Z · 20 hours old.

What changed

Compared the exact retained October21 Reuters evidence only; no later event or independent confirmation has been established. Keep the dated article. Next observation: a subsequent dated transaction-processing/new-deal disclosure and the scope of delayed deals. No current-market freshness or new story is claimed.

What to follow next

If IBM sustains new transaction-processing business after delayed deals clear, the durable-demand reading would strengthen.

Last source assessment: 2026-10-22T19:05:40.662384+00:00. An assessment clock is not a new event, a new source date or current market coverage.

Accepted 2026-10-21T23:20:30.052212+00:00 · analysis as of 2026-10-21T22:29:51.437174Z.

Review: KEEP · Publication: PREPARED · 8/8 destination previews.

KEEP after reading the exact revised canonical prose, SEO and all eight preview packages and visually inspecting all five desktop and five mobile Neo PDF pages. The Reuters-only attribution and report-versus-event uncertainty remain explicit. The 7-8% software outlook raises the floor from 6-8%, not the ceiling; the 25% deferred/75% net-new split is limited to transaction-processing revenue, not all IBM growth. Persistence is a testable countercase, not established demand. Source and known-at clocks remain separate. No inspected rights-cleared media is available: accept the explicit text-only media gap. Preparation only; no dispatch authority.

▼ Reuters reports oil's early rally faded by the October 21 close · Keep dated view · 1 accepted version

Reader question: If oil rallied more than $2 during the session but Brent ended nearly flat and WTI lower, what does the closing snapshot actually tell us about the competing pressures on oil?

SINGLE-SOURCE REPORT - REUTERS: Brent finished nearly flat and WTI lower on October 21 after an earlier rally; Reuters cites geopolitics and lower US stockpiles.

Competing explanation and limits: The serious countercase is that a faded rally does not mean the concerns cited by Reuters vanished. If Reuters' account is accurate, opposing considerations could have offset one another at the close while remaining unresolved. A nearly flat Brent settlement and a lower WTI close would then describe the balance at that moment, rather than a durable change in the oil outlook.

Analysis as of 2026-10-21T22:29:51.437174Z · 20 hours old.

What changed

Compared the exact retained October21 Reuters evidence only; no later event or independent confirmation has been established. Keep the dated article. Next observation: a later comparable close plus independently verified inventory/diplomatic context. No current-market freshness or new story is claimed.

What to follow next

If later comparable closes regain the earlier strength alongside independently verified diplomatic or inventory developments, the October 21 retreat would say less about the persistence of those pressures.

Last source assessment: 2026-10-22T19:05:30.423692+00:00. An assessment clock is not a new event, a new source date or current market coverage.

▼ **Gas tuần 9/10: bơm thêm dưới chuẩn, tồn kho trên trung bình năm năm · Keep dated view · 2 accepted versions**

Reader question: Bơm thêm chậm hơn chuẩn mùa vụ có nghĩa đệm gas đã thiếu, khi tổng tồn kho vẫn cao hơn trung bình năm năm không?

CONFIRMED — EIA ghi mức bơm ròng 67 Bcf so với bình quân cùng tuần 90 Bcf. Tổng tồn kho vẫn trên trung bình năm năm; tốc độ bổ sung và mức đệm cần được đọc riêng.

Competing explanation and limits: Đối trọng của cách đọc khan hiếm là tồn kho vẫn cao hơn trung bình năm năm. Mức tăng ròng dưới chuẩn trong một tuần chưa đủ chứng minh phần đệm đã thiếu, cũng chưa cho biết vì sao nhịp bổ sung thấp hơn.

Analysis as of 2026-10-20T18:24:02.977884Z · 2 days old.

What changed

KEEP. EIA still shows the Oct 9 observation released Oct 15: 3,567 Bcf, +67, 143 below last year and 45 above the five-year stock baseline. No later period or correction is available. The Oct 22 release is future at this cutoff; do not infer its result. Retain article and exact inspected media.

▼ **Interpretation changed between accepted versions**

Prior interpretation: Phân tích Capital Chronicle: nếu nhu cầu vượt nguồn cung, tồn kho có thể phải bù phần thiếu. Số dư theo mùa vụ chỉ mô tả điểm xuất phát; cần thời tiết, sản lượng và luồng LNG để kiểm tra sức ép tiếp theo.

Current interpretation: Phân tích Capital Chronicle: phần đệm đã tích lũy vẫn có thể cao hơn trung bình trong một tuần được bổ sung ít hơn thông lệ mùa vụ. Vì vậy, dùng mức tồn cao hơn chuẩn để bỏ qua nhịp bơm dưới chuẩn sẽ mất thông tin; suy từ nhịp bơm ấy sang thiếu khí cũng vượt quá dữ kiện.

This compares authored analysis; a change in wording does not establish a new market fact.

What to follow next

Kỳ tiếp theo còn bổ sung dưới chuẩn của chính tuần đó, hay nhịp bổ sung phục hồi trong khi phần đệm vẫn trên trung bình?

Last source assessment: 2026-10-21T21:05:13.164405+00:00. An assessment clock is not a new event, a new source date or current market coverage.

Gas storage: refill pace versus stock level

Publisher
U.S. Energy Information Administration

Source date
Observed Oct 9, 2026; released Oct 15; reread Oct 20

Record
Net injections into storage totaled 67 Bcf for the week ending October 9, compared with the five-year (2021–2025) average net injections of 90 Bcf and last year's net injections of 80 Bcf during the same week. Working natural gas stocks totaled 3,567 Bcf as of Friday, October 9, 2026, according to EIA estimates. Stocks were 45 Bcf (1%) more than the five-year average and 143 Bcf (4%) lower than last year at this time.

▼ **Southwest 2025: đóng phòng hộ chưa khép lại chi phí** · Updated story · 2 accepted versions

Reader question: When a company closes a fuel hedge and receives cash, why can related fuel expense still appear in later periods, and what does its collateral disclosure actually establish?

CONFIRMED — Hồ sơ quý II/2025 của Southwest cho thấy tiền thu khi đóng phòng hộ và chi phí quyền chọn đi theo các kỳ khác nhau. Chênh lệch thời điểm chưa chứng minh hãng thiếu tiền.

Competing explanation and limits: Phản đề của Capital Chronicle: chi phí tiếp tục xuất hiện có thể phù hợp với lịch giao dịch nhiên liệu dự kiến ban đầu. Riêng khoản thu khi đóng hợp đồng chưa đủ để đánh giá hiệu quả cả chương trình phòng hộ; cần đối chiếu với chi phí quyền chọn và rủi ro hàng thực.

Analysis as of 2026-10-21T21:04:06.088334Z · 22 hours old.

What changed

UPDATE warranted by a newly retained dated issuer case, not by new 2026 news. Southwest Q2 2025 closed OTC fuel options: about $40m cash proceeds, about $36m expense reclassification, about $209m remaining AOCI net of proceeds and before tax, and no cash collateral posted or received at June 30. Distinguish cash receipt, earnings recognition and underlying fuel dates; OTC options are not evidence of exchange variation margin or liquidity distress. Preserve original general futures explainer and invalidate its former prepared binding for this follow-up.

▼ **Changed source propositions**

ADDED

Accepted source: During second quarter 2025, the Company terminated its remaining portfolio of fuel hedging contracts, which were scheduled to settle through 2027, to effectively close its fuel hedging portfolio.

▼ **Interpretation changed between accepted versions**

Prior interpretation: Phân tích CC: nếu giá tăng trước khi bán lúa mì, vị thế futures bán có thể cần thêm tiền ký quỹ trong lúc doanh thu hàng chưa về. Khoản bù kinh tế dự kiến từ hàng thực chưa đồng nghĩa có tiền đúng lúc.

Current interpretation: Phân tích của Capital Chronicle: tiền thu khi đóng hợp đồng, chi phí ghi nhận trong quý và chi phí chờ các kỳ mua nhiên liệu trả lời ba câu hỏi khác nhau. Một khoản chi phí được ghi nhận về sau chưa chứng minh có thêm tiền phải trả đúng kỳ đó.

This compares authored analysis; a change in wording does not establish a new market fact.

Source coverage is partial. Retained support does not resolve the missing checks.

PASS LOCATOR ONLY NOT FACT EVIDENCE · Named source gap
